PROJECT REPORT

Submitted By: Ishant Kumar Sahu
Reg. No: 25BAI11195
Branch: CSE (Spec. in AI & ML)
Year: 2025–2026
Course Code: CSE0001
Date: 30-March-2026

Introduction

This project represents my work as a Student Digital Ambassador at VIT Bhopal University. The main objective of this project was to develop a digital literacy portfolio

that helps students understand the importance of safe and responsible use of technology. Through five different tasks, I explored various aspects of digital literacy, including awareness, professional presence, online platforms, communication, and cyber safety. All the tasks were organized in a GitHub repository to showcase my work and learning. This project helped me improve both my technical and communication skills while preparing me for the digital world.

Task 1: Digital Literacy Awareness Infographic

Tool Used: Canva

Description:
For this task, I created an infographic that explains the concept of digital literacy in a simple and visually appealing way. The infographic covers key areas such as useful digital tools, safe internet practices, email etiquette, and building a professional online presence. The aim was to present important information in a structured format so that students can easily understand and apply it in their daily lives.

Reflection:
While working on this task, I found Canva very easy and helpful for designing. The most interesting part was

arranging content visually instead of writing long paragraphs. The challenging part was selecting the right amount of content and keeping it concise without missing important points.

Task 2: Student Digital Portfolio

Platforms Set Up: GitHub, LinkedIn, Kaggle

Purpose:
These platforms help in building a professional digital identity. GitHub is used for storing and managing coding projects, LinkedIn is used for professional networking and career opportunities, and Kaggle is used for learning data science and machine learning.

Future Plans:
Over the next four years, I plan to use GitHub to upload my projects and track my coding progress. I will use LinkedIn to build connections with professionals and explore internships. Kaggle will help me improve my skills in data science and participate in competitions.

Task 3: Coding & Collaboration Platforms

Platforms Used: HackerRank and Google Workspace

Practiced/Built:
I completed a beginner-level coding challenge on

HackerRank to improve my programming skills. I also created a Digital Literacy Awareness Quiz using Google Forms and linked it to a response sheet.

Academic Help:
These platforms are very useful for my academic growth. HackerRank helps in improving coding skills and preparing for interviews, while Google Workspace helps in collaboration, data collection, and managing academic tasks efficiently.

Task 4: Email Etiquette & Communication

Reflection on Communication Failure:
Consider a situation where a student sends an email to a professor without a proper subject line and uses informal language like “Hey, I need more time.” The professor may ignore the email because it lacks clarity and professionalism. As a result, the student may miss the deadline and lose marks.

This problem could be avoided by following proper email etiquette, such as using a clear subject line, formal greeting, and structured message. Professional communication ensures that the message is understood clearly and increases the chances of receiving a positive response.

Task 5: Cybercrime Awareness (UPI Fraud)

Reflection:
While researching UPI fraud, I was surprised to learn how easily people can be tricked into sending money through simple methods like QR codes and fake payment requests. Many users are not aware that entering a UPI PIN means sending money, not receiving it. This misunderstanding is commonly exploited by scammers.

Habit Change:
As a result, I will be more careful while using digital payment apps. I will always verify payment requests before approving them and avoid scanning unknown QR codes. I will also make sure not to share sensitive information such as OTP or UPI PIN with anyone.

Conclusion

This project helped me understand that digital literacy is not just about using technology but also about using it responsibly and safely. From creating a professional portfolio to learning about cyber threats, I gained valuable knowledge that will help me in my academic and professional journey. This experience has improved my awareness and prepared me to guide others in using digital tools effectively.
